ABOUT AKALIKO

MAINTENANCE MADE EASIER

Our team draws on decades of heavy-equipment experience to design, manufacture and remanufacture hydraulic cylinders for mines, quarries and contractors. We believe the best components are built for the machine and for the maintenance team that keeps it running.

Our range covers dump truck hoist, steering and suspension cylinders; excavator boom, stick and bucket cylinders; and dozer, loader and grader cylinders, all built for heavy loads and abrasive conditions.

We focus on improvements that make cylinders more durable and easier to service: precision-honed barrels, upgraded rod coatings (HVOF/HVAF), advanced sealing systems, contamination control and oil-port conversions.

With a global supply network and regional rebuild centers, we keep heavy equipment working with faster turnaround, longer service life and lower total cost.

WHY AKALIKO

FIVE REASONS TO SWITCH

Why mining operators switch their fleet cylinders to Akaliko.

What you gain

Advanced seal and surface technology

Seals matched to your duty cycle (see page 8), precision-honed barrels and hard, wear-resistant rods extend service life, cut unplanned stops and lengthen the time between reseals.

Drop-in fit across fleets

Our replacements are built to OEM-quality standards and fit the original ports and mounts, so you can swap cylinders quickly with no re-engineering. Keep your existing pins, hoses and brackets.

12-month / 5,000-hour warranty

We engineer for harsh conditions and back new cylinders with a limited warranty of 12 months or 5,000 operating hours, whichever comes first. Clam cylinders are covered for 3 months or 3,000 hours. Terms and exclusions apply.

Global reach, local support

With 27 branches worldwide, we stock high-demand cylinders, rods and seal kits for fast dispatch and consolidated shipments, so critical parts reach your site quickly.

Part Exchange and Consignment Stock

Trade in worn cylinders through Part Exchange, with your replacement shipped first, or keep consigned stock on site and pay only when you use it.

HEAVY-DUTY CYLINDERS

BUILT FOR MINING DUTY

Greater reliability

- Pressure and function tested before dispatch
- Seal options matched to the duty cycle (standard, high-temperature or low-friction)
- Controlled surface finish and straightness for smooth, even motion
- Clean assembly and packaging (port caps, anti-corrosion wrap and moisture absorbers) to keep contamination out

Greater durability

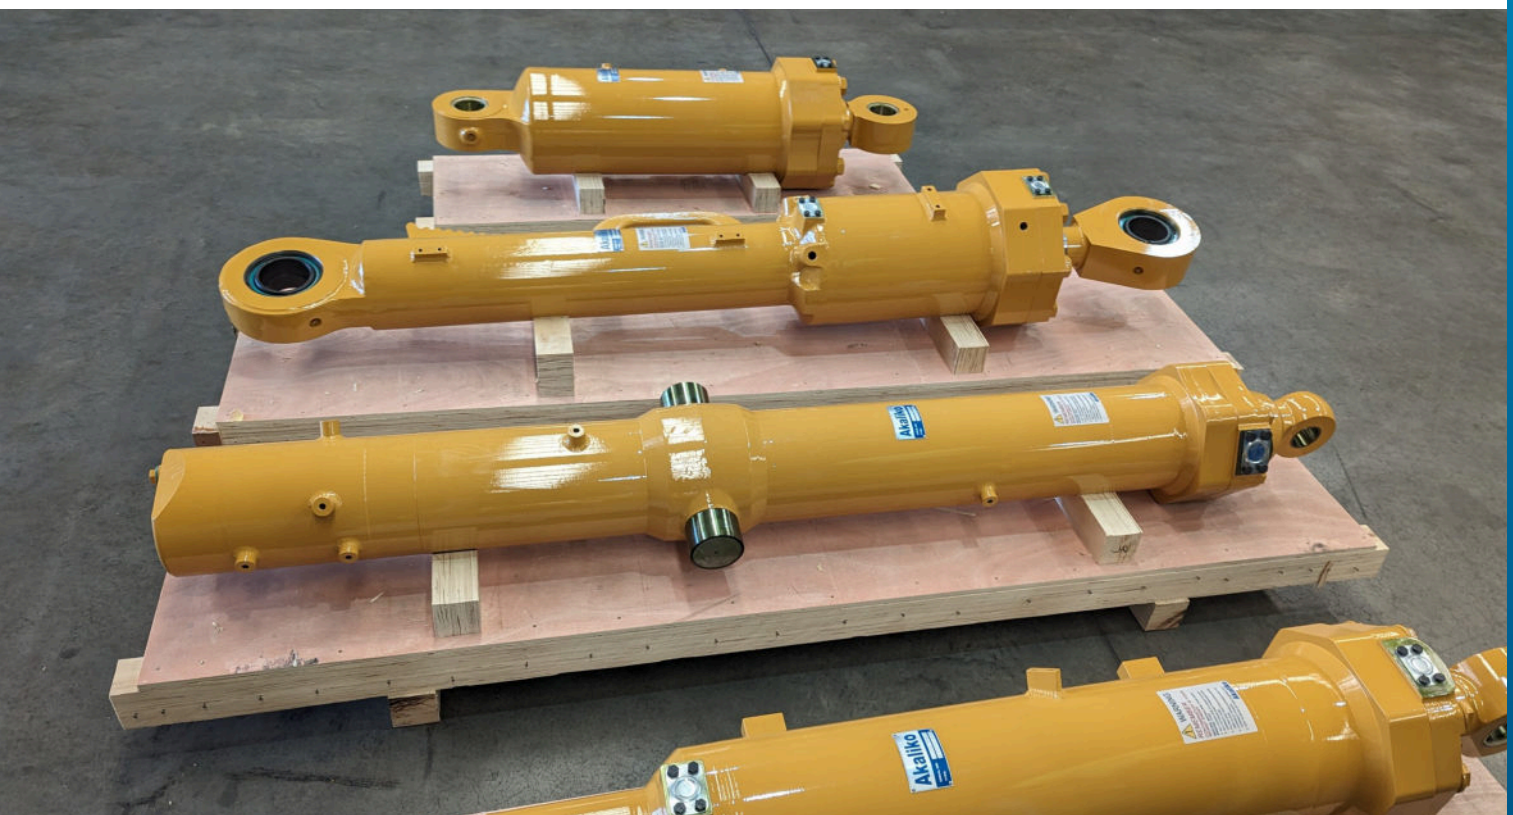
- Wear- and corrosion-resistant surface treatments for longer rod and barrel life
- Tight geometric tolerances for even wear and reliable sealing
- Proven in mining duty cycles: heat, dust and vibration

Lower total cost

- Fewer leaks and failures mean less unplanned downtime and oil loss
- Drop-in replacements for the original cylinders, with no machine modifications; some redesigned for better compatibility
- Ready-made service kits make repairs quicker and easier to budget

Easier service

- Wear monitoring by our team with MineIQ Force helps plan repairs before failures
- Regional branches, local parts availability and technical support for faster turnaround
- Repair and remanufacturing with documented test results and a certificate for your records
- Part Exchange and Consignment Stock programs keep a ready cylinder on hand



INSIDE THE CYLINDER

KEY COMPONENTS

Eight components that decide how long a cylinder lasts in mining duty.

Spherical bearing

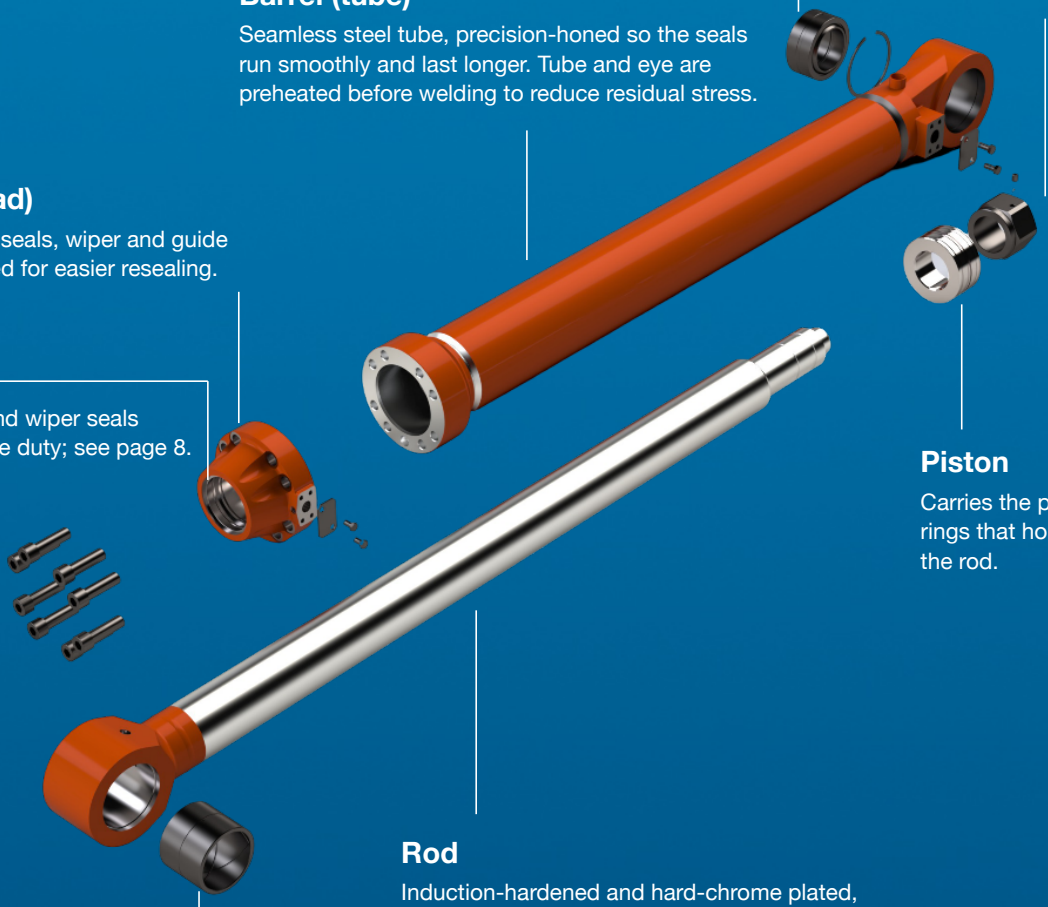
Takes up pin misalignment, protecting the cylinder from side loads.

Lock nut

Torqued and secured to stay tight under vibration and pressure cycles.

Barrel (tube)

Seamless steel tube, precision-honed so the seals run smoothly and last longer. Tube and eye are preheated before welding to reduce residual stress.



Gland (head)

Holds the rod seals, wiper and guide bushing; bolted for easier resealing.

Seals

Rod, piston and wiper seals matched to the duty; see page 8.

Piston

Carries the piston seal and wear rings that hold pressure and guide the rod.

Rod

Induction-hardened and hard-chrome plated, with HVOF coatings available for harsher duty.

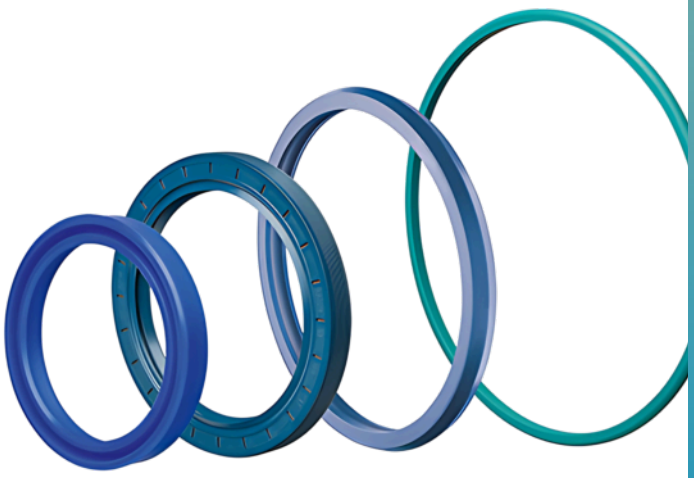
Pin bushing

Replaceable bushing in the rod eye, so pivot wear doesn't reach the eye itself.

SEALING TECHNOLOGY

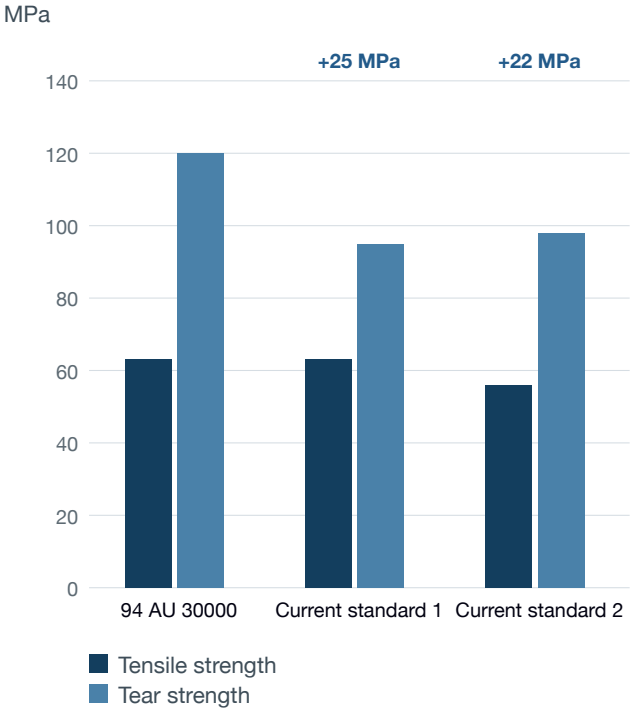
NEW POLYURETHANE GENERATION

94 AU 30000 from Freudenberg Sealing Technologies is a new polyurethane grade that goes beyond the limits of standard commercial materials. It offers higher pressure stability, longer life and reliable performance in demanding hydraulics.



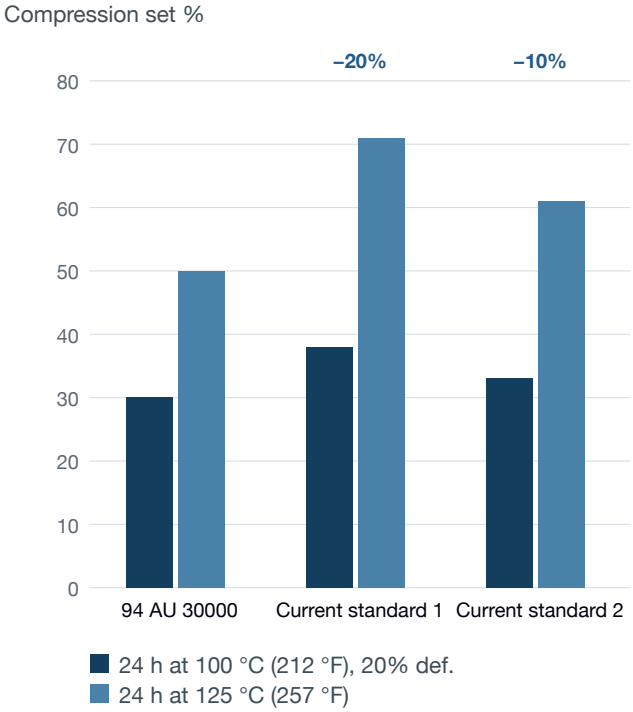
Higher pressure resistance

Tear strength: the new material resists extrusion significantly better than current standard materials.



Better high-temperature performance

Compression set: much lower relaxation than current standard materials.



FREUDENBERG
INNOVATING TOGETHER

Data: Freudenberg Sealing Technologies.

MANUFACTURING

PRODUCTION NETWORK

Our manufacturing network combines in-house plants with qualified partner lines in China and Türkiye to deliver new cylinders at scale.

Nantong, China
Excavator, dump truck and dozer cylinders

Xuzhou, China
Strategic partnership with XCMG for ultra-class mining excavator cylinders

Shanxi, China
Electric-drive truck cylinders

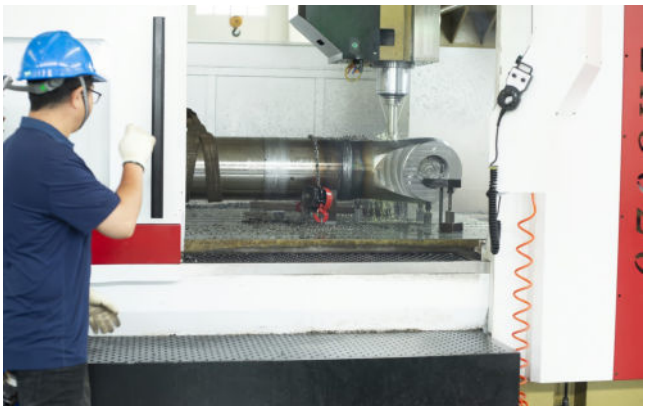
Quanzhou, China
Excavator, dozer, grader and underground loader cylinders

Shandong, China
Manufacturing alliance with an aftermarket manufacturer for mechanical-drive haul truck cylinders

Ankara, Türkiye
Excavator cylinders up to the 300-tonne class

ISO 9001:2015 | ISO 14001:2015 | ISO 45001:2015

Automated production line



Precision machining

Cylinder test bench

Painting

MANUFACTURING

WHAT WE BUILD AND HOW

Scale

Core plants in Nantong and Quanzhou, supported by partner lines in Shanxi, Xuzhou, Shandong and Ankara, give us more than 150,000 m² of cylinder production space, from one-off prototypes to volume production.

Machining

Multi-axis CNC turning and milling and precision honing give the bores the geometry and surface finish that seals need to last. Rods are ground and polished to precise diameter, roundness and straightness before plating, and critical dimensions are checked during machining and tracked with statistical process control (SPC).

Welding

Robotic cells and certified welders work to qualified welding procedures. Tube and eye are preheated, and temperatures are controlled between passes to limit residual stress. Welds are checked by non-destructive testing where the application calls for it.

Assembly and testing

Cylinders are assembled in dedicated clean areas. Parts are cleaned before assembly, seals are fitted with the right lubricants and tools, and each cylinder is flushed to a defined oil cleanliness level. Every cylinder is function-, pressure- and leak-tested before dispatch.

Finishing

Cylinders are painted to specification, with rods and ports protected, then packed for safe transport and ready to install on site.

QUALITY

MANAGEMENT OF CHANGE

You run the operation. We manage the change.

Whenever a critical component changes, from switching an original part to an Akaliko-built one to a new design, material, supplier or process, our Management of Change workflow tests the change, reviews the evidence and keeps an auditable record before production. Each change is checked for material composition, mechanical properties and weld integrity against OEM-quality requirements.

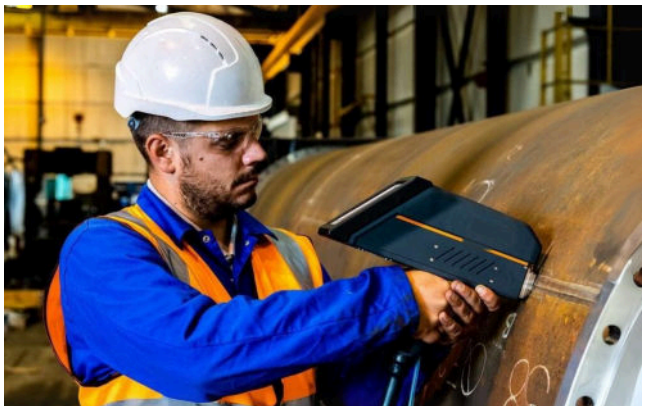


Image: Hitachi High-Tech Analytical Science

Image: Screening Eagle (Equotip)

How we verify a change

Chemical analysis

A spectrometer checks the material composition, confirming the alloy grade and catching out-of-spec elements early.

Hardness testing

Portable Equotip hardness testing checks welds and other affected areas against OEM-quality hardness requirements.

Finite element analysis

Computer simulation tests the proposed change under the machine's operating loads and checks the safety factor, fatigue life and, where relevant, buckling.

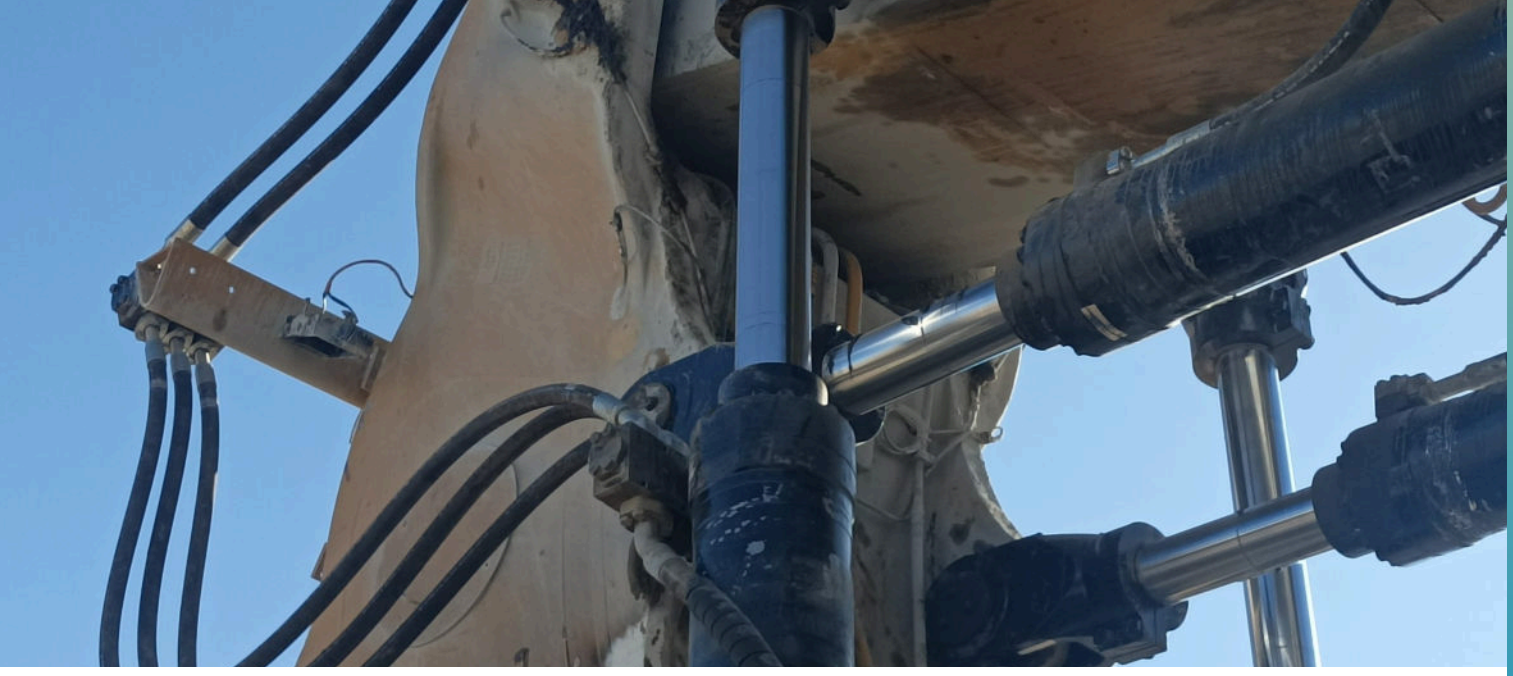
Weld integrity review

We review the welding procedures, welder qualifications and non-destructive test reports to confirm each weld was made and checked to a qualified procedure.

METALLURGICAL AND ENGINEERING SERVICE PROVIDERS

PETER LACZKO PTY LTD

Quantise Consulting Engineers



PART EXCHANGE

TRADE IN. TRADE UP. KEEP MOVING.

Make your maintenance budget go further. Exchange worn or surplus cylinders through the Akaliko Part Exchange (PEX) program for a tested replacement and credit for your old cylinder.

1. **Replacement shipped**
2. **Return your old cylinder**
3. **Condition inspection**
4. **Credit issued**

Your advantages

Fast turnaround: We ship your replacement first, so you swap without waiting and cut downtime.

Quality you can trust: Every replacement is tested and comes with an Akaliko warranty.

Fair value, clearly shown: You see the inspection findings and photos behind your credit.

Sustainability built in: Worn cylinders are remanufactured, not scrapped, so less material goes to waste.

Our PEX promise

Trade in an eligible cylinder and receive a tested Akaliko replacement, subject to availability. Your credit is confirmed after we inspect the returned cylinder at our facility, and you see the findings and photos behind it.

CONSIGNMENT

STOCK PROGRAM

We keep cylinders in stock for you on consignment, so you have spares on hand without tying up capital. You pay for cylinders as you use them; at the end of the contract, buy the remaining stock or return it.

1. **Plan your stock**
2. **We stock for you**
3. **Use as needed**
4. **Buy or return at the end**

The benefits for you

Lower financial risk: Pay as you use, with no large up-front stock investment.

On site and ready: Stock on your site, ready to fit when you need it.

Extended warranty: 18 months or 5,000 hours, whichever comes first, from delivery.

Minimal holding fee*: Little or no holding fee, set in the contract and offset against your purchases.

Simple logistics: Consolidated shipments from our regional hub.

Long-term partnership: We forecast your usage and plan stock levels with you.

*Consigned stock remains Akaliko's property until purchased. The holding fee is reconciled against purchases and returns at the end of the contract; damaged, missing or non-returnable items are charged. Returned stock must be unused and in its original condition, and cylinders stored beyond the agreed period may need resealing. Full terms are set out in the consignment contract.

REPAIR
AND REMANUFACTURING

We repair and remanufacture cylinders to get them back into reliable service. Every job follows documented procedures for strip-down, machining, rebuild and testing, and comes with a test certificate for your records.

Our repair services

- Disassembly, inspection and failure report
- Rod rechroming or replacement, barrel honing or replacement
- Welding, fabrication and machining
- Resealing with new seal kits
- Pressure, leak and function testing, with a test report
- Optional upgrades: design improvements, rod coatings, wipers and wear rings

We also offer

- On-site troubleshooting, removal and fitting support
- Preventive maintenance and MineIQ Force wear monitoring

Warranty on repairs: 6 months or 3,000 hours, whichever comes first. Terms and exclusions apply.

HOW TO ORDER

FROM PART NUMBER TO DELIVERY

Find your cylinder in this catalog by machine brand, model and application, or search our online store by OEM reference or Akaliko part number. Our team updates the store every week. If the part, cylinder or service you need isn't listed, contact us directly.

Click or scan to see our full catalog online

Find your part

Look up your cylinder in this catalog, or search shop.akaliko.global by OEM reference, Akaliko part number or machine model.

Request a quotation

Use the Request a Quotation button on the product page, or email info@akaliko.global.

Confirm your order

We confirm price, availability, warranty, lead time and delivery terms in writing.

Delivery

Shipped by sea or air freight, with a range of Incoterms to suit your operation.

To help us quote quickly and accurately, include the OEM reference or Akaliko part number, quantity, machine model and serial number, and delivery location.

Warranty at a glance

New cylinders	Clam cylinders	Repaired cylinders	Consignment stock
12 months or 5,000 hours	**3 months or 3,000 hours**	**6 months or 3,000 hours**	**18 months or 5,000 hours**

Whichever comes first, from dispatch (consignment stock: from delivery). Terms and exclusions apply; see akaliko.global for the full warranty policy.
